QUESTIONS & ANSWERS  
**DEMO VERSION**  
*(LIMITED CONTENT)*

# Question 1

---

Question Type: MultipleChoice

---

In Oracle Cloud Infrastructure Block Volume Service, which feature enables you to increase the size of a block volume without any downtime?

## Options:

---

- A- Volume Bursting
- B- Online Resizing
- C- Dynamic Volume Resizing
- D- Volume Elasticity

## Answer:

---

B

## Explanation:

---

Online Resizing allows you to increase the size of a block volume without any downtime. This feature enables you to scale up your storage capacity as needed without interrupting the services running on the block volume.

# Question 2

---

Question Type: MultipleChoice

---

What is the main purpose of the Auto-Tiering feature in Oracle Cloud Infrastructure Object Storage?

## Options:

---

- A- Giving real-time usage analytics
- B- Allowing unlimited data access patterns
- C- Reducing storage costs by moving objects between Standard and Infrequent
- D- Removing storage fees for large objects

Answer:

---

C

Explanation:

---

The main purpose of the Auto-Tiering feature in Oracle Cloud Infrastructure Object Storage is to reduce storage costs by automatically moving objects between Standard and Infrequent Access storage tiers based on access patterns. This helps organizations save money by storing less frequently accessed data in a lower-cost storage tier.

## Question 3

---

Question Type: MultipleChoice

---

In the Oracle Cloud Shared Security Model, what is Oracle responsible for?

Options:

---

- A- Configuring IAM policies for all customers automatically
- B- Controlling user access policies within customer accounts
- C- Securing customer data stored in Object Storage
- D- Managing and securing the physical infrastructure and underlying cloud services

Answer:

---

D

## Question 4

---

Question Type: MultipleChoice

---

What is a key advantage of using virtual nodes in an Oracle Container Engine for Kubernetes cluster?

Options:

---

- A- They require manual upgrades of the data plane infrastructure.
- B- They provide more configuration flexibility as compared to managed nodes.

- C- They allow for a serverless Kubernetes experience, reducing operational overhead.
- D- They can only be used in basic clusters.

**Answer:**

---

C

**Explanation:**

---

Virtual nodes abstract away the underlying infrastructure management, providing a serverless Kubernetes experience that reduces the operational burden on users.

## Question 5

---

**Question Type:** MultipleChoice

---

Which feature does the Oracle Cloud Infrastructure Compute service leverage for ensuring high availability of applications?

**Options:**

---

- A- Fault Domains
- B- Real Application Clusters (RAC)
- C- Golden Gate
- D- Data Guard

**Answer:**

---

A

**Explanation:**

---

Fault domains in Oracle Cloud Infrastructure are used to distribute instances across different physical hardware within an availability domain. This helps in ensuring high availability and fault tolerance by reducing the impact of hardware failures on instances.

# Question 6

---

Question Type: MultipleChoice

---

Which component of the Oracle Cloud Infrastructure Networking service provides a private connection between a VCN and an on-premises network?

## Options:

---

- A- Network Address Translation (NAT)
- B- Dynamic Routing Gateway (DRG)
- C- Internet Gateway
- D- Service Gateway

## Answer:

---

B

## Explanation:

---

Dynamic Routing Gateway (DRG) is the component of Oracle Cloud Infrastructure Networking service that provides a private connection between a VCN and an on-premises network using VPN or FastConnect. It allows secure communication between the cloud and on-premises resources.
