Question 1

Question Type: MultipleChoice

Which resources are responsible for configuring Fusion or other application environments, managing Fusion user security roles, and ensuring proper access and data?

Options:

- A- OGL Content Developers
- B- OGL Administrators
- C- Fusion Configuration and Data Management Leads
- D- IT Security and Network Administration Leads

Answer:

C

Explanation:

Fusion Configuration and Data Management Leads are responsible for configuring Fusion or other application environments, managing security roles, and ensuring access and data integrity (option C). OGL Content Developers (option A) focus on content creation, OGL Administrators (option B) manage the OGL console, and IT Security/Network Leads (option D) handle broader infrastructure, not Fusion-specific tasks. These Leads possess the technical expertise to align Fusion configurations with OGL requirements, ensuring seamless integration and secure data handling---a critical role distinct from OGL-specific responsibilities.

Question 2

Question Type: MultipleChoice

Based on what assignments can OGL content be tailored to display to individual users?

Options:

- A- User preferences
- B- Organizational hierarchy

- C- Fusion security roles
- D- Manager delegation

Answer:

C

Explanation:

OGI content can be tailored to individual users based on Fusion security roles (option C), which determine access and visibility within the application. This ensures content aligns with users' permissions and responsibilities. User preferences (option A) and organizational hierarchy (option B) may influence indirectly but aren't primary mechanisms, while manager delegation (option D) is unrelated to content display. Fusion security roles provide a precise, system-driven method for personalization, leveraging Oracle's role-based architecture effectively.

Question 3

Question Type: MultipleChoice

Which permissions are associated with the Viewer security role in the OGI Console?

Options:

- A- Read-only access for content libraries, OGI content, and analytics
- B- Edit OGI content item text and create messages
- C- Create, edit, and publish OGI content
- D- Configure OGI application settings and deployment to the host application

Answer:

A

Explanation:

The Viewer role in the OGI console has read-only access to content libraries, content, and analytics, limiting it to observation. Options B, C, and D involve editing or configuration permissions reserved for higher roles like Editor or Administrator.

Question 4

Question Type: MultipleChoice

Which types of applications use JavaScript to enable OGL?

Options:

- A- Fusion applications
- B- Oracle applications
- C- Non-Fusion and third-party applications

Answer:

C

Explanation:

Non-Fusion and third-party applications rely on JavaScript to integrate and enable OGL functionality, as they lack the native integration of Fusion applications. Fusion (option A) and broader Oracle applications (option B) typically use built-in mechanisms, not JavaScript alone.

Question 5

Question Type: MultipleChoice

What are the guiding principles of OGL deployment?

Options:

- A- Start work immediately with any available resources, adjust reactively to obstacles, and focus on finishing quickly.
- B- Focus on business outcomes, leverage best practices, and iterate and continuously improve
- C- Await further direction from leadership, plot your course based on personal intuition, and work independently.

Answer:

B

Explanation:

The guiding principles of OGL deployment are to focus on business outcomes, leverage best practices, and iterate and continuously improve (option B). These principles align with Oracle's Agile-inspired methodology, emphasizing results, proven approaches, and adaptability. Option A reflects a haphazard, reactive approach, while option C suggests indecision and isolation---both contrary to OGL's structured, outcome-driven framework. Option B ensures deployments meet organizational goals efficiently and sustainably, reflecting Oracle's strategic deployment ethos.

Question 6

Question Type: MultipleChoice

What is the standard use of a Base Guide?

Options:

- A- You want to familiarize the project team with overall business processes.
- B- You want targeted assistance for specific areas of the host application.
- C- You want clear, step-by-step instructions for essential tasks.

Answer:

C

Explanation:

A Base Guide in Oracle Guided Learning (OGL) is a content type designed to deliver clear, step-by-step instructions for completing essential tasks within a host application. It differs from Business Process Training, which focuses on familiarizing teams with overarching processes (option A), and Use Cases, which provide targeted assistance for specific areas (option B). Base Guides are practical tools aimed at enabling end users to perform critical functions efficiently, making them a cornerstone of task-oriented guidance in OGL.

Question 7

Question Type: MultipleChoice

Which content library saves users time by keeping cloud configuration support, documentation, and "how-to" guidance easily accessible?

Options:

- A- Business Process Training
- B- Oracle Content
- C- My Content
- D- Use Cases

Answer:

B

Explanation:

The Oracle Content library is a centralized repository in OGL that provides prebuilt resources, including cloud configuration support, official documentation, and 'how-to' guides. This library is designed to save users time by offering readily accessible, standardized content. Business Process Training (option A) focuses on process education, My Content (option C) is for custom user-created content, and Use Cases (option D) target specific scenarios rather than broad configuration support. Oracle Content is the most efficient option for quick access to essential guidance.

Question 8

Question Type: MultipleChoice

Which phase includes publishing new and updated OGL content activities?

Options:

- A- Test
- B- Prepare
- C- Update
- D- Publish

Answer:

D

Explanation:

The Publish phase is dedicated to publishing new and updated OGL content (option D), making it available in production after testing and updates. Test (option A) validates content, Prepare (option B) plans for changes, and Update (option C) modifies content---none involve deployment. Publish finalizes the cycle, ensuring users access the latest, approved guides, marking the culmination of prior efforts.
