Question 1

Question Type: MultipleChoice

Which two product features might a process analyst use the most in contrast to a process developer?
(Choose two.)

Options:

- A- Process simulation.
- B- Business rules.
- C- Mediator services.
- D- Web Forms.
- E- BPM Studio.
- F- ADF forms.

Answer:

A, D

Question 2

Question Type: MultipleChoice

Which human task pattern is best suited for a single approver scenario where the role is resolved through group membership? (Choose two.)

Options:

- A- User
- B- Group
- C- Initiator
- D- FYI
- E- Management

Answer:

A

Explanation:

Single Approver: Use this option for a single user to act on a task. If the task is assigned to a role or group with multiple users, then one member must claim the task and act on it.

http://docs.oracle.com/cd/E28280_01/user.1111/e15175/bpmug_ws_perform_tasks.htm

Question 3

Question Type: MultipleChoice

Which two statements are true about an auto-generated ADF task form for a human task? (Choose two.)

Options:

- A- It can be customized by changing the layout and by adding and removing UI components.
- B- It is created in a separate project and in a directory that you select.
- C- You initiate auto-generation from the properties window for the human task activity on your model.
- D- By default, it is automatically deployed when you deploy your BPM project.

Answer:

B, C

Question 4

Question Type: MultipleChoice

Which three attributes are unique to adaptive case management-based processes as compared to traditional BPMN-based processes? (Choose three.)

Options:

- A- The sequence of execution of activities is determined by process participants at run time.
- B- They are routine, well-defined, structured processes.
- C- New stakeholders, not just task participants, may be added at run time.
- D- They are exclusively event-driven.
- E- They involve human-centric processing.

Answer:

A, C, D

Question 5

Question Type: MultipleChoice

What determines the life span of the value in a subprocess data object?

Options:

A- process

B- task

C- subprocess

D- project

Answer:

D

Question 6

Question Type: MultipleChoice

Which option is unusable as a start point to initiate a new instance of a process?

Options:

A- Initiator User Task

B- Call Task

C- Receive Task

D- Message Start Event

Answer:

B

Question 7

Question Type: MultipleChoice

Which two statements are true about running and analyzing simulation results? (Choose two.)

Options:

- A- You must wait until a simulation run finishes in order to see up-to-date results in charts.
- B- During a simulation run, in-flight instances are always allowed to finish before a simulation completes.
- C- During a simulation run, cost and time data are automatically collected for all activities, events, and gateways.
- D- You can use only Business Process Composer to create and run simulations.
- E- The number appearing above the left-most bar atop an activity represents the high water mark for the queue.

Answer:

B, D

Explanation:

Let in-flight instances finish before simulation ends

If selected, simulation ends only when the specified number of instances completes. If unselected, simulation stops after the simulation duration is completed. At that point, all incomplete instances are shown in either "in-process" or "queue" status.

In Business Process Composer you can only run simulations based on test data you define using Business Process Composer.

Question 8

Question Type: MultipleChoice

You have a situation where a collection of rules might provide a flexible way of externalizing logic in an application.

Which two are accurate considerations to access as you decide to use a decision table or if-then rules? (Choose two.)

Options:

- A- The decision table's spreadsheet metaphor is compact and familiar to end users.
- B- Decision tables can use globals while if-then rules cannot.
- C- The logic likely requires more rules if expressed as a decision table.
- D- Unlike with a decision table, an Expression Builder is provided for if-then rules to help you craft condition expressions.
- E- Built-in error prevention features for decision tables can help you build more complete and accurate rules.

Answer:

B, E

Question 9

Question Type: MultipleChoice

Which two statements accurately identify capabilities available for rules testing? (Choose two.)

Options:

- A- You can create a test suite or a test template without first creating a design function.
- B- You can test rulesets by creating a business rules function that calls the decision function.
- C- You can use Enterprise Manager to test rules via a decision function.
- D- You can mark individual test suites as "draft" to turn them off for test validation.

Answer:

B, D

Explanation:

You can test rulesets by creating a decision function and calling the decision function from Rules Designer with an Oracle Business Rules function.

Draft Testcheck box to turn off the test validation.
