Question 1

Question Type: MultipleChoice

Which statement is true about Java byte code?

Options:

- A- It can run on any platform.
- B- It can run on any platform only if it was compiled for that platform.
- C- It can run on any platform that has the Java Runtime Environment.
- D- It can run on any platform that has a Java compiler.
- E- It can run on any platform only if that platform has both the Java Runtime Environment and a Java compiler.

Java bytecodes help make 'write once, run anywhere' possible. You can compile your program into bytecodes on any platform that has a Java compiler. The bytecodes can then be run on any implementation of the Java VM. That means that as long as a computer has a Java VM, the same program written in the Java programming language can run on Windows 2000, a Solaris workstation, or on an iMac.

Answer:

D

Question 2

Question Type: MultipleChoice

Given the following class declarations:

```
public abstract class Animal
```

```
public interface Hunter
```

```
public class Cat extends Animal implements Hunter
```
