Question 1

Question Type: MultipleChoice

The first query has an estimated cost of 100,000,000 and is offloaded to a HeatWave cluster for execution:

```
SELECT flightno, departure, country FROM flight JOIN airport_geo ON 'from'=airport_id;
```

The second query has an estimated cost of 10,000 and is NOT offloaded to the Heatwave cluster for execution:

```
SELECT DISTINCT country FROM airport_geo ORDER BY country;
```

Which two methods can offload the second query to the Heatwave cluster for execution? (Choose two.)

Options:

- A- SET use_secondary_engine=FORCED;
- B- SET secondary_engine_cost_threshold=1000;
- C- SET optimizer_trace="enabled=on";
- D- CALL sys.heatwave_load(['airport_geo']);
- E- CALL sys.heatwave_advisor(JSON_OBJECT("auto_enc", JSON_OBJECT("mode", "recommend")));

Answer:

A, B

Question 2

Question Type: MultipleChoice

You want to restore a stand-alone DB system to a high-availability DB system with a point-in-time recovery.

Which three are required? (Choose three.)

Options:

- A- Every user table must have a primary key.
- B- Point-in-time recovery must be enabled before the point in time to which you want to restore.

- C- An automatic backup taken before the selected point in time must be available.
- D- A manual backup taken before the selected point in time must be available.
- E- The stand-alone DB system must remain active during the restore.

Answer:

B, C, D

Question 3

Question Type: MultipleChoice

You want to import data into a DB system with MySQL Shell `util.loadDump()`.

Which option can speed up the load?

Options:

- A- `updateGtidSet: off`
- B- `showMetadata: false`
- C- `skipBinlog: true`
- D- `deferTableIndexes: all`

Answer:

C

Question 4

Question Type: MultipleChoice

What must you do to minimize a DB system down time caused by automatic maintenance operations?

Options:

- A- Create read replicas.
- B- Add HeatWave cluster.
- C- Enable crash recovery.
- D- Enable high availability.

Answer:

D

Question 5

Question Type: MultipleChoice

You have successfully enabled high availability of a stand-alone DB system. Which is true?

Options:

- A- The DB system performs load balancing by distributing client connections to all instances.
- B- The DB system provides new port numbers on the same endpoint to connect to the secondary instances for read-only connections.
- C- The DB system provides new endpoints to connect to the secondary instances for read-only connections.
- D- The DB system has three instances running in different availability or fault domains.

Answer:

D
