Question 1

Question Type: MultipleChoice

Which three organizational aspects need to be considered to successfully transition to a cloud operating model? (Choose three.)

Options:

- A- People
- B- Technology
- C- Process
- D- Branding
- E- Budget
- F- Facilities

Answer:

A, B, C

Explanation:

<https://blogs.vmware.com/management/2020/01/the-cloud-operating-model.html>

Aligning and connecting people, process, and technologies across layers of the IT and business organizations is an important success factor for cloud deployments.

Question 2

Question Type: MultipleChoice

Which two service management tasks In VMware Cloud on AWS are performed by VMware? (Choose two.)

Options:

- A- Capacity management of the cloud software-defined data centers (SDDCs)

- B- Updates to VMware hardware compatibility
- C- Notifications sent before a regular update
- D- Updates to the software-defined data center (SDDC) software
- E- Creation and configuration of VPC during the software-defined data center (SDDC) deployment

Answer:

C, D

Question 3

Question Type: MultipleChoice

Which two steps must an administrator take in order to deploy an instance of Azure VMware Solutions?
(Choose two.)

Options:

- A- Create a support request with Microsoft Azure Support to create a host quota.
- B- Deploy and configure Microsoft Enterprise Edge (MSEE) appliances.
- C- Create a support request with VMware Support to create a private cloud.
- D- Associate the subscription with a Microsoft Enterprise Agreement.
- E- Deploy and Configure Microsoft Azure ExpressRoute.

Answer:

A, E

Explanation:

To deploy an instance of Azure VMware Solutions, an administrator must take the following two steps:

Create a support request with Microsoft Azure Support to create a host quota. This is required because Azure VMware Solution hosts are dedicated bare-metal servers that are not shared with other customers¹. The host quota determines the number and size of hosts that can be provisioned in a subscription¹. The host quota can be requested for an eligible Azure plan, such as Microsoft Enterprise Agreement or Cloud Solution Provider².

Deploy and configure Microsoft Azure ExpressRoute. This is required because Azure VMware Solution uses ExpressRoute to connect the private cloud to the Azure virtual network and the on-premises network³. ExpressRoute provides a secure, high-bandwidth, and low-latency connection that enables seamless workload migration and hybrid cloud scenarios³. The administrator must deploy and configure an ExpressRoute circuit, a virtual network gateway, and a virtual network³. Reference: 1: Deploy and configure Azure VMware Solution, 2: Plan the Azure VMware Solution deployment, 3:

Question 4

Question Type: MultipleChoice

A cloud administrator is looking for a unified solution to collect and analyze security events for troubleshooting from: VMware vSphere Windows Operating Systems Physical servers Web servers Database servers Amazon Web Services Which VMware Cloud service can meet this requirement?

Options:

- A- VMware vRealize Automation Cloud
- B- CloudHealth Secure State
- C- VMware vRealize Log Insight Cloud
- D- VMware vRealize Network Insight Cloud

Answer:

C

Explanation:

<https://blogs.vmware.com/management/2022/08/forwarding-vsphere-audit-and-authentication-events-from-vrealize-log-insight-to-a-siem.html>

Question 5

Question Type: MultipleChoice

Which three items should be considered when performing a hot migration of a virtual machine (VM)? (Choose three.)

Options:

- A- The source and destination host management network IP address families must match

- B- The vGPU configuration of the VM
- C- The status of the guest operating system in the VM
- D- The CPU instruction set required by the VM
- E- The source and destination host must have shared access to the storage that contains the VM
- F- The status of VMware Tools on the VM

Answer:

C, E, F

Explanation:

For the source and destination host to have shared access to the storage that contains the VM, they must be able to access the same datastore. This requires that the datastore be available to both hosts and that the datastore has the same name on both hosts.

The status of VMware Tools on the VM should also be checked before performing a hot migration. VMware Tools is a suite of utilities that enhances the performance of a virtual machine's guest operating system and improves the management of the virtual machine. If VMware Tools is not installed or not up to date, the hot migration may fail.

Finally, the status of the guest operating system in the VM should also be checked before performing a hot migration. The guest operating system should be up and running and not in a suspended state. If the guest operating system is in a suspended state, the hot migration may fail.

The CPU instruction set required by the VM and the vGPU configuration of the VM are not items to consider when performing a hot migration of a virtual machine. The source and destination host management network IP address families do not need to match for the hot migration to be successful.

Question 6

Question Type: MultipleChoice

What is one way in which VMware Multi-Cloud addresses challenges with the cloud computing model?

Options:

- A- Provides savings on capital expenses and the use of a flexible payment structure where payment is only done based on the resources used.
- B- Provides visibility and tools to manage resources, workloads and operations across clouds from a common operating environment.
- C- Eliminates worry associated with managing IT infrastructures and shifts focus to application development and other priorities using the most up-to-date technology.

D- Increases agility that encompasses scalability, customizability, and access to the cloud service from anywhere and on any device.

Answer:

B

Explanation:

<https://www.vmware.com/topics/glossary/content/multi-cloud.html>

VMware Multi-Cloud provides visibility and tools to manage resources, workloads and operations across clouds from a common operating environment. This eliminates the need to manage multiple cloud environments in different clouds and provides a unified view of all cloud resources and applications. This makes it easier to monitor and manage workloads across clouds, reducing complexity and increasing agility. VMware Multi-Cloud also provides powerful automation and orchestration capabilities to help streamline operations and improve efficiency. [1]

Question 7

Question Type: MultipleChoice

Which three components can be part of a virtual machine template? (Choose three.)

Options:

- A- Installed applications, tools, and patches
- B- vSphere tags
- C- Custom attributes
- D- Virtual Machine hardware configuration
- E- Guest operating system
- F- Virtual machine snapshots

Answer:

A, D, E

Explanation:

To create a virtual machine template, you will need to configure the virtual machine hardware

configuration, install the necessary applications, tools, and patches, and select the guest operating system. The template can also include vSphere tags and custom attributes to further customize the virtual machine. Additionally, the template can include virtual machine snapshots which will save the current state of the virtual machine and can be used to quickly restore the machine to the same state.

Question 8

Question Type: MultipleChoice

A cloud administrator is managing a VMware Cloud on AWS environment consisting of a single cluster with six hosts. There have been no changes made to the Elastic DRS configuration.

In which two situations will Elastic DRS add another a host to the cluster? (Choose two.)

Options:

- A- When availability zone failure occurs
- B- When memory utilization reaches 90%
- C- When network utilization reaches 90%
- D- When CPU utilization reaches 90%
- E- When storage utilization reaches 80%

Answer:

A, E

Explanation:

<https://docs.vmware.com/en/VMware-Cloud-on-AWS/services/com.vmware.vmc-aws-operations/GUID-961C4B32-6093-4C2E-AFE5-5B1F56BF4EEE.html>
