Question 1

Question Type: MultipleChoice

Suppose you are asked to disable/remove the customer review related functionalities. You can not disable the review module directly because the customer module depends on it. What is the possible way to remove all HTML outputs of the review module, from the frontend and backend? :

Options:

A- Turn-off Review module output globally by extending

<Magento_install_dir>/vendor/magento/module-backend/etc/config.xml

B- Turn-off Review module output globally by extending

<Magento_install_dir>/vendor/magento/module-backend/etc/module.xml

C- Create plugin or Override the

class \Magento\Framework\View\Element\AbstractBlock and toHtml() method, and implement the logic to return empty data in case of review module's block instance is present.

D- Create plugin or Override the

class \Magento\Backend\Block\Template and isEnabled() method, and implement the logic to return false value in case of review module's block instance is present.

Answer:

A

Answer:

C

Question 5

Question Type: MultipleChoice

A merchant complains about the related accessory products, which they assigned to the virtual product, not being visible on the store front. What is the reason for this?

Options:

A- Related products association must be explicitly activated in the admin panel

- B- Browser cache refresh is required
- C- Virtual products do not support related products
- D- Related products are out of stock

Answer:

A

Question 6

Question Type: MultipleChoice

You are developing an in-house solution for catalog management which is implemented as a Magento module called MyCompany_MyModule. To streamline integration with the ERP system you decided to expose MyCompany_MyModule'S functionality via REST.

What are the three minimum requirements to achieve this?

Options:

- A- Add webapi. xml declarations for all methods to be exposed
- B- Specify the parameter and return types in the PHP method signatures
- C- Represent all functionalities which need to be exposed as service contracts
- D- Specify the parameter and return types in the method annotations
- E- Add Cap: annotations to all methods which need to be exposed

Answer:

A, C, E

Question 7

Question Type: MultipleChoice

You are writing a new method for retrieving the level of the category in a category tree by its ID. You have a select query:

With the Staging functionality enabled, the returned category level value changes over time while the category tree stays the same. How do you fix this issue?

Options:

- A- Add filters based on updated_in and created.in for Staging compatibility
- B- Replace \$categoryResource->getLinkField() with ScategoryResource->getEntityIdField()
- C- Replace ScategoryId With ScategoryResource->getEntityId(ScatgoryId)
- D- Replace ScategoryId With ScategoryResource->getLinkId(ScategoryId)

Answer:

D

Question 8

Question Type: MultipleChoice

When your class will be instantiated all the dependencies injected in your class constructor will also get instantiated, and it will trigger a chain reaction of object creation, this can really slow down the process. What could be the solution of above problem?

Options:

- A- Use Proxy classes with help of di.xml
- B- Use VirtualType classes with help of di.xml
- C- Use Dependency Injection with help of di.xml
- D- Use factory classes instead of Model.

Answer:

A
