Question 1

Which two methods add sorting to collections inherited from the \Magento\Framework\Model\ResourceModel\Db\Collection\AbstractCollection class? (Choose two.)

Options:

A- setOrder

B- setSorting

C- addSorting

D- addOrder

Answer:

A, D

Explanation:

The two methods that add sorting to collections inherited from the \Magento\Framework\Model\ResourceModel\Db\Collection\AbstractCollection class are setOrder and addOrder. These methods allow adding one or more order clauses to a collection query.

The setSorting and addSorting methods do not exist in Adobe Commerce.

Verified Reference: [Adobe Commerce Developer Guide - Collections]

In Magento 2, collections inherited from \Magento\Framework\Model\ResourceModel\Db\Collection\AbstractCollection class can be sorted using the setOrder and addOrder methods. The setOrder method is used to set the order for a field in the collection, specifying the field by which to sort and the direction of the sorting (ASC or DESC). The addOrder method is similar but allows for adding multiple sorting orders to the collection, enabling more complex sorting scenarios. There are no setSorting or addSorting methods in the standard Magento 2 collection classes.

Question 2

Question Type: MultipleChoice

A new custom module is built for the existing Adobe Commerce store. A merchant has requested a few

frontend updates. For this, a developer has to implement a custom style.

What is the location of the less file that will be included by default?

Question 3

Question Type: MultipleChoice

A product has been added to the Adobe Commerce Store, and it contains a value for the custom product attribute. A merchant reports that the attribute value is not displayed in the Additional Information tab on the product detail page.

Which action will correct this problem?

Options:

A- The attribute must be moved to the specific group in the attribute set

B- The attribute property 'Use in Product Tab' must be set to 'yes'

C- The attribute property 'Visible on Catalog Pages on Storefront' must be set to 'yes'.

Answer:

C

Explanation:

The 'Visible on Catalog Pages on Storefront' attribute property determines whether or not the attribute value is displayed in the Additional Information tab on the product detail page. If this property is set to 'no', the attribute value will not be displayed.

For a custom product attribute to be displayed in the Additional Information tab on the product detail page in Magento, it needs to be visible on the catalog pages on the storefront. This visibility is controlled by the attribute property 'Visible on Catalog Pages on Storefront'. When this property is set to 'yes', Magento includes the attribute in the Additional Information tab, making it visible to customers browsing the product. This setting ensures that only relevant and intended attributes are shown on the storefront, allowing for better product information management and customer experience.

Question 4

Question Type: MultipleChoice

Which condition must be satisfied to ensure that a Discard Subsequent Rules option that is set to "Yes" actually prevents multiple discounts from being applied to the same product?

Options:

A- Each pricing rule must have From and To date.
B- Each pricing rule must have the defined priority.
C- Each pricing rule must be created with Coupon code

Answer:

B

Explanation:

The Discard Subsequent Rules option is only applied if the pricing rules have different priorities. If two pricing rules have the same priority, the discount from both rules will be applied.

For the 'Discard Subsequent Rules' option set to 'Yes' to work effectively, each pricing rule must have a defined priority. When multiple discount rules can apply to the same product, Magento evaluates

them in the order of their priority values. If a rule with 'Discard Subsequent Rules' set to 'Yes' is applied, any subsequent rules with lower priority (higher priority number) will not be applied to that product.

Question 5

Question Type: MultipleChoice

Which type of product has the ability to build customizable products from a variety of options?

Options:

A- Grouped
B- Virtual
C- Bundle

Answer:

C

Explanation:

A bundle product is a product that is made up of a collection of other products. This type of product is ideal for selling products that are often purchased together, such as a printer and ink cartridges.

A bundle product in Adobe Commerce has the ability to build customizable products from a variety of options. Bundle products are ideal for creating custom kits or packages where customers can choose from options for each component. For example, building a custom computer setup from selected components like monitors, keyboards, CPUs, etc. Grouped products are collections of standalone products that can be purchased individually, and virtual products are intangible items.
