Version: 28.3

Question: 1

You need to resolve the local machine learning pipeline performance issue. What should you do?

- A. Increase Graphic Processing Units (GPUs).
- B. Increase the learning rate.
- C. Increase the training iterations,
- D. Increase Central Processing Units (CPUs).

Answer: A

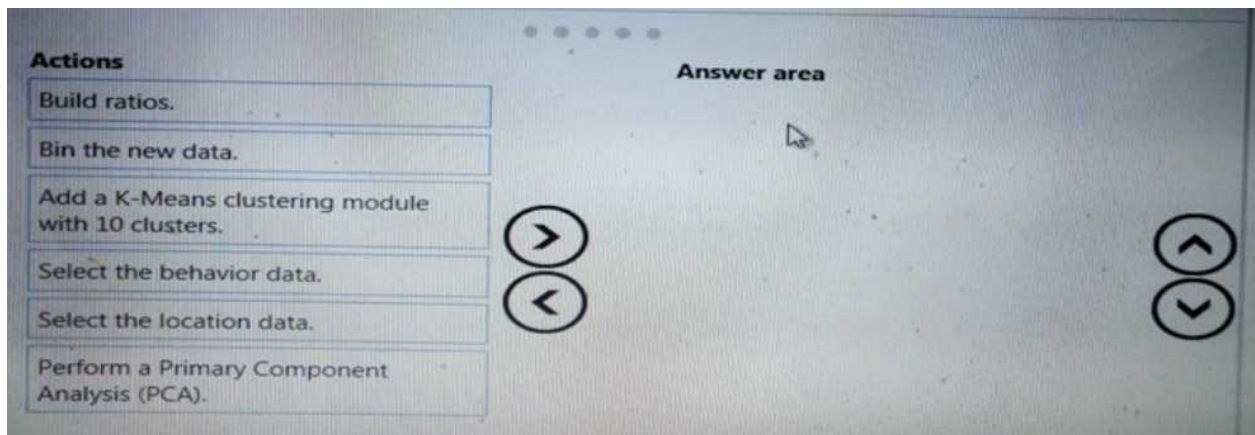

Explanation:

Question: 2

DRAG DROP

You need to modify the inputs for the global penalty event model to address the bias and variance issue.

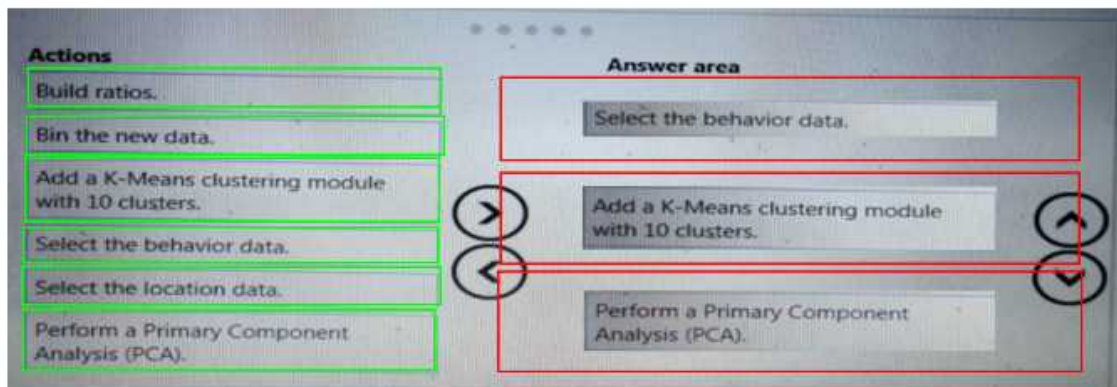

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Answer:

Question: 3

You need to select an environment that will meet the business and data requirements.

Which environment should you use?

- A. Azure HDInsight with Spark MLlib
- B. Azure Cognitive Services
- C. Azure Machine Learning Studio
- D. Microsoft Machine Learning Server

Answer: D

Explanation:

Question: 4

DRAG DROP

You need to define a process for penalty event detection.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows a digital interface for a drag-and-drop question. On the left, under the heading "Actions", there is a vertical list of eight text boxes, each containing a different action. On the right, under the heading "Answer area", there is a large empty space. Between the two areas are two sets of circular arrows: one set with a right-pointing arrow and a left-pointing arrow, and another set with an up-pointing arrow and a down-pointing arrow. A mouse cursor is visible over the "Answer area".

Actions

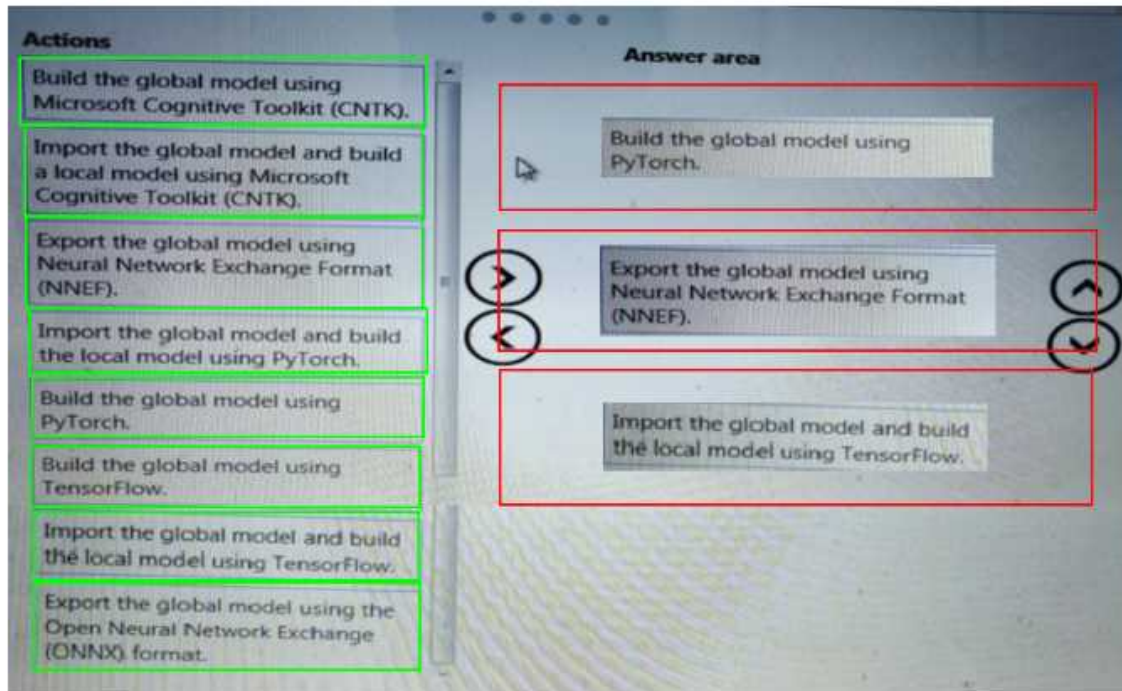

- Build the global model using Microsoft Cognitive Toolkit (CNTK).
- Import the global model and build a local model using Microsoft Cognitive Toolkit (CNTK).
- Export the global model using Neural Network Exchange Format (NNEF).
- Import the global model and build the local model using PyTorch.
- Build the global model using PyTorch.
- Build the global model using TensorFlow.
- Import the global model and build the local model using TensorFlow.
- Export the global model using the Open Neural Network Exchange (ONNX) format.

Answer area

Answer:

Explanation:

Answer:

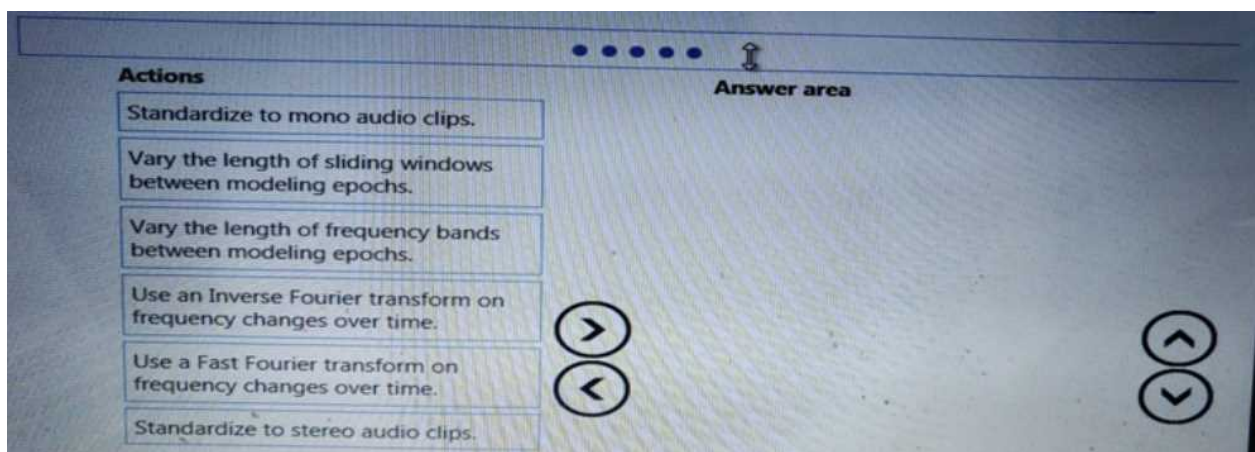

Question: 5

DRAG DROP

You need to define a process for penalty event detection.

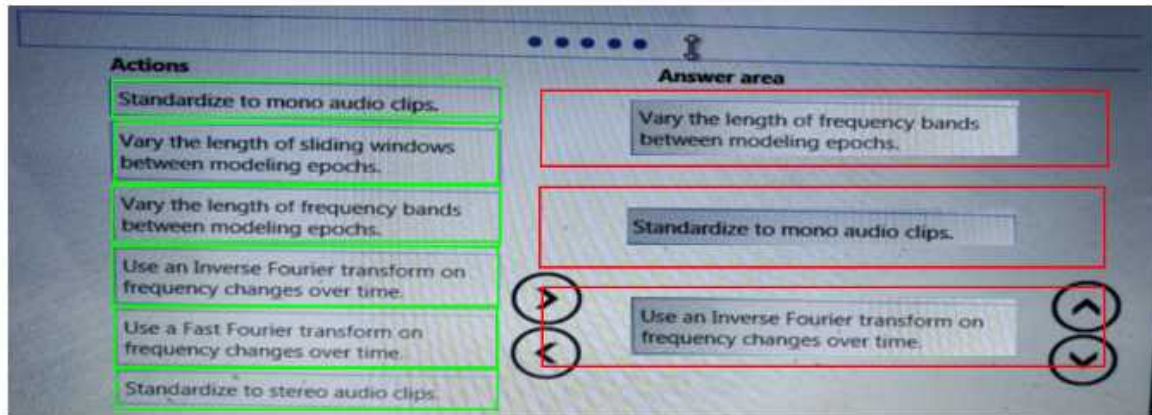

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Answer:
