Version: 19.4

Question: 1	
HOTSPOT	
To complete the sentence, select the appropriate o	ption in the answer area.
Answer Area	changes to relationships between entities, geographically distributed writes.
A relational database is appropriate for	scenarios that involve a high volume of transactional writes. writes that have varying data structures.
Evalanation	Answer:
Explanation:	
A relational database is appropriate for scenarios that involve a high volume of	ahamma ta walatianahina hatusan antitian
scenarios triat involve a riigii volume or	changes to relationships between entities geographically distributed writes
	transactional writes
	writes that have varying data structures
Disadvantages of non-relational databases include: not perform ACID transactions.	Data Consistency — non-relational databases do
Note: Relational databases are optimized for writes availability. Advantages of relational databases inclintegrity, and flexibility.	·
Incorrect Answers: Use a relational database when data that you work to frequent changes. Use Cloud storage (no relational database) for geographics.	·

Question: 2	
HOTSPOT	
To complete the sentence, select the appropriate o	ption in the answer area.
An extract, load, and transform (ELT) proce	a data pipeline that includes a transformation engine, a separate transformation engine, a target data store powerful enough to transform data, data that is fully processed before being loaded to the target data store.
	Answer:
Explanation:	

Answer Area			
	An extract, load, and transform (ELT) process requires	data that is fully processed before being le	oaded to the target data store.
Question: 3			
<u> </u>	 r-to date sales by region is an e	vample of which type	of analytics?
A Dai Chart Showing year	1-to date sales by region is an e	varrible of writer type	of affaiglies:
A. descriptive			
B. diagnostic			
C. predictive			
D. prescriptive			
			Answer: B
			71115111111
Explanation:			741500011.5
			7 HISWELL B
			, moneti B
			7.IIISWCII B
Question: 4			, moneti B
Question: 4	co soloct the appropriate entice	n in the answer area	, moner, B
Question: 4	ce, select the appropriate optio	n in the answer area.	, moner, B
Explanation: Question: 4 HOTSPOT To complete the sentence answer area		n in the answer area.	
Question: 4 HOTSPOT	A visualizatio		student enrollment [cognitive analytics]
Question: 4 HOTSPOT	A visualizatio	n that shows a university's current	student enrollment cognitive descriptive predictive
Question: 4	A visualizatio	n that shows a university's current	student enrollment cognitive analytics descriptive
Question: 4	A visualizatio	n that shows a university's current	student enrollment cognitive descriptive predictive prescriptive
Question: 4	A visualizatio	n that shows a university's current	student enrollment cognitive descriptive predictive prescriptive
Question: 4	A visualizatio	n that shows a university's current	student enrollment cognitive descriptive predictive prescriptive
Question: 4 HOTSPOT	A visualizatio	n that shows a university's current	student enrollment cognitive descriptive predictive prescriptive

A visualization that shows a university's current student enrollment versus the maximum capacity is an example of

analytics.

Generally speaking, data analytics comes in four types (Figure 1):

Descriptive, to answer the question: What's happening? Diagnostic, to answer the question: Why's happening?

Predictive, to answer the question: What will happen?

Prescriptive, to answer the question: What actions should we take?

Question: 5

DRAG DROP

Your company plans to load data from a customer relationship management (CRM) system to a data warehouse by using an extract load, and transform (ELT) process.

Where does data processing occur for each stage of the ELT process? To answer, drag the appropriate locations to the correct. Each location may be used once, or not at all, You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Explanation:

Extract: The CRM system The data warehouse Load: An in-memory data integration Transform: tool

Box 1: The CRM system

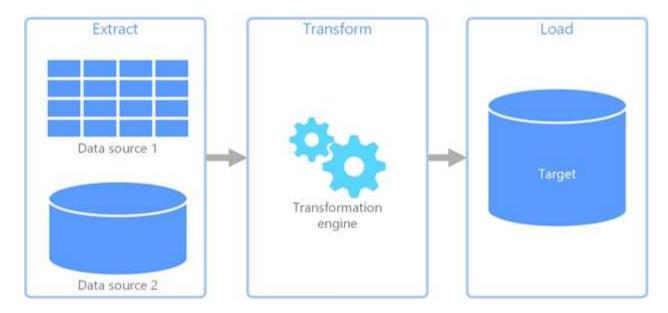

Data is extracted from the CRM system.

Box 2: The data warehouse

Data is loaded to the data warehouse.

Box 3: An in-memory data integration tool

The data transformation that takes place usually involves various operations, such as filtering, sorting, aggregating, joining data, cleaning data, deduplicating, and validating data.
