(LIMITED CONTENT)

Question 1

Question Type: MultipleChoice

You must add an Amazon Web Services (AWS) network access list (NACL) rule to allow SSH traffic to a subnet for temporary testing purposes. When you review the current inbound and outbound NACL rules, you notice that the rules with number 5 deny SSH and Telnet traffic to the subnet.

What can you do to allow SSH traffic?

Options:

- A- You do not have to create any NACL rules because the default security group rule automatically allows SSH traffic to the subnet.
- B- You must create a new allow SSH rule anywhere in the network ACL rule base to allow SSH traffic.
- C- You must create two new allow SSH rules, each with a number bigger than 5.
- D- You must create two new allow SSH rules, each with a number smaller than 5.

Answer:

D

Question 2

Question Type: MultipleChoice

Refer to the exhibit.

```
{
  "AWSTemplateFormatVersion" : "2010-09-09"
  "Resources" : {
    "FGT-HQ-1" : {
      "Type" : "AWS::EC2::Instance",
      "Properties" : {
        "ImageId" : "ami-01bd410bcaa617f44",
        "InstanceType" : "t2.xlarge",
      }
    }
  }
}
```

A senior administrator in a multinational organization needs to include a comment in the template shown in the exhibit to ensure that administrators from other regions change the Amazon Machine Image (AMI) ID to one that is valid in their location.

How can the administrator add the required comment in that section of the file?

Options:

- A- The administrator can include the comment with the aws cloudformation update-stack command.
- B- The administrator must convert the template file to YAML format to add a comment.
- C- The administrator can add the comment starting with the # character next to the 'Resources' section.
- D- The administrator must update the AWSTemplateFormatVersion to the latest version.

Answer:

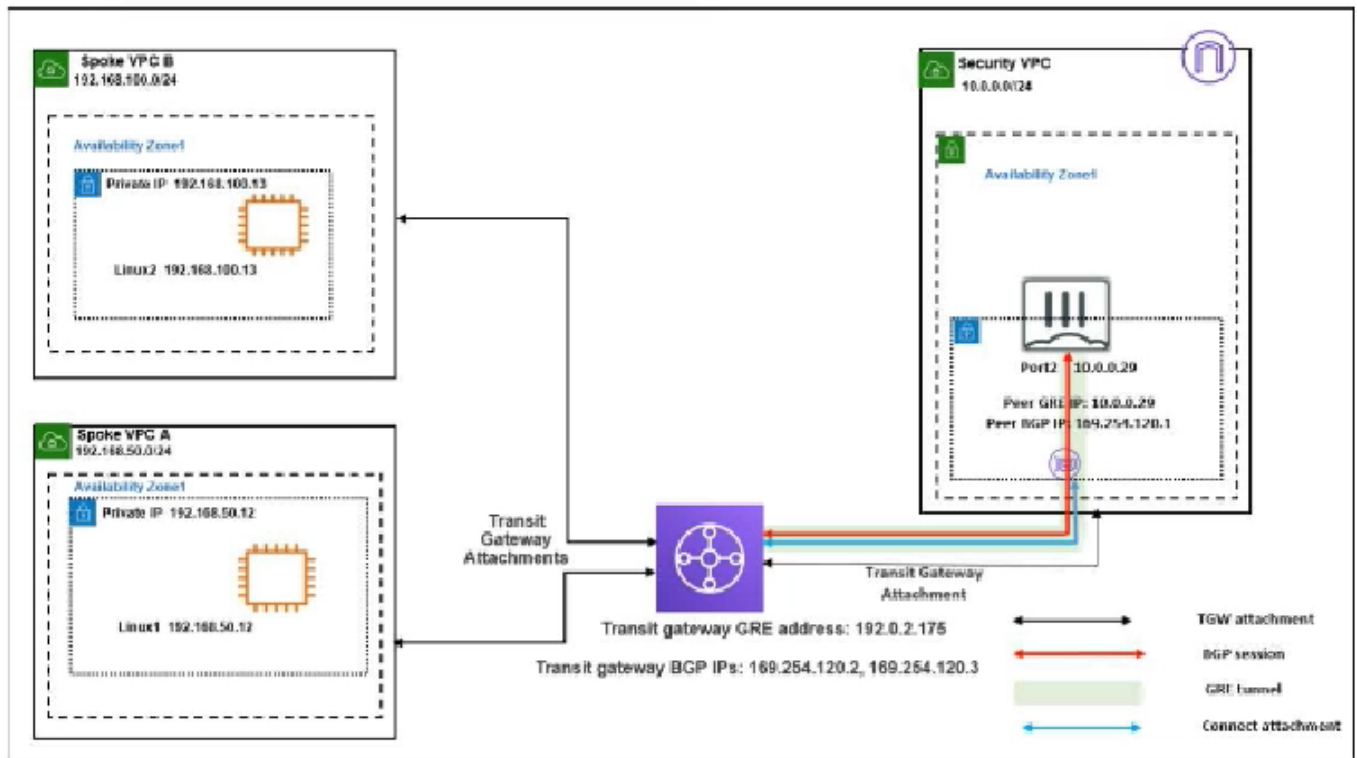

C

Question 3

Question Type: MultipleChoice

Refer to the exhibit.

Network Topology

Refer to the exhibit.

You attempted to access the Linux1 EC2 instance directly from the internet using its public IP address in AWS. However, your connection is not successful.

Given the network topology, what can be the issue?

Options:

- A- There is no connection between VPC A and VPC B.
- B- There is no Internet Gateway attached to the Spoke VPC A.
- C- The Transit Gateway BGP IP address is incorrect.
- D- There is no Elastic IP address attached to FortiGate in the Security VPC.

Answer:

B

Question 4

Question Type: MultipleChoice

The cloud administration team is reviewing an AWS deployment that was done using CloudFormation.

The deployment includes six FortiGate instances that required custom configuration changes after being deployed. The team notices that unwanted traffic is reaching some of the FortiGate instances because the template is missing a security group.

To resolve this issue, the team decides to update the JSON template with the missing security group and then apply the updated template directly, without using a change set.

What is the result of following this approach?

Options:

- A- If new FortiGate instances are deployed later, they will include the updated changes.
- B- Some of the FortiGate instances may be deleted and replaced with new copies.
- C- The update is applied, and the security group is added to all instances without interruption.
- D- CloudFormation rejects the update and warns that a new full stack is required.

Answer:

B

Question 5

Question Type: MultipleChoice

Your DevOps team is evaluating different Infrastructure as Code (IaC) solutions for deploying complex Azure environments.

What is an advantage of choosing Azure Bicep over other IaC tools available?

Options:

- A- Azure Bicep generates deployment logs that are optimized to improve error handling.
- B- Azure Bicep provides immediate support for all Azure services, including those in preview.
- C- Azure Bicep requires less frequent schema updates than Azure Resource Manager (ARM) templates.
- D- Azure Bicep can reduce deployment costs by limiting resource utilization during testing.

Answer:

B

Question 6

Question Type: MultipleChoice

An administrator is relying on an Azure Bicep linter to find possible issues in Bicep files.

Which problem can the administrator expect to find?

Options:

- A- The resources to be deployed exceed the quota for a region.
- B- Some resources are missing dependsOn statements.
- C- There are output statements that contain passwords.
- D- One or more modules are not using runtime values as parameters.

Answer:

B

Question 7

Question Type: MultipleChoice

Refer to the exhibit.

In which type of FortiCNP insights can an administrator examine the findings triggered by this policy?

Options:

- A- Data
- B- Threat
- C- Risk
- D- User activity

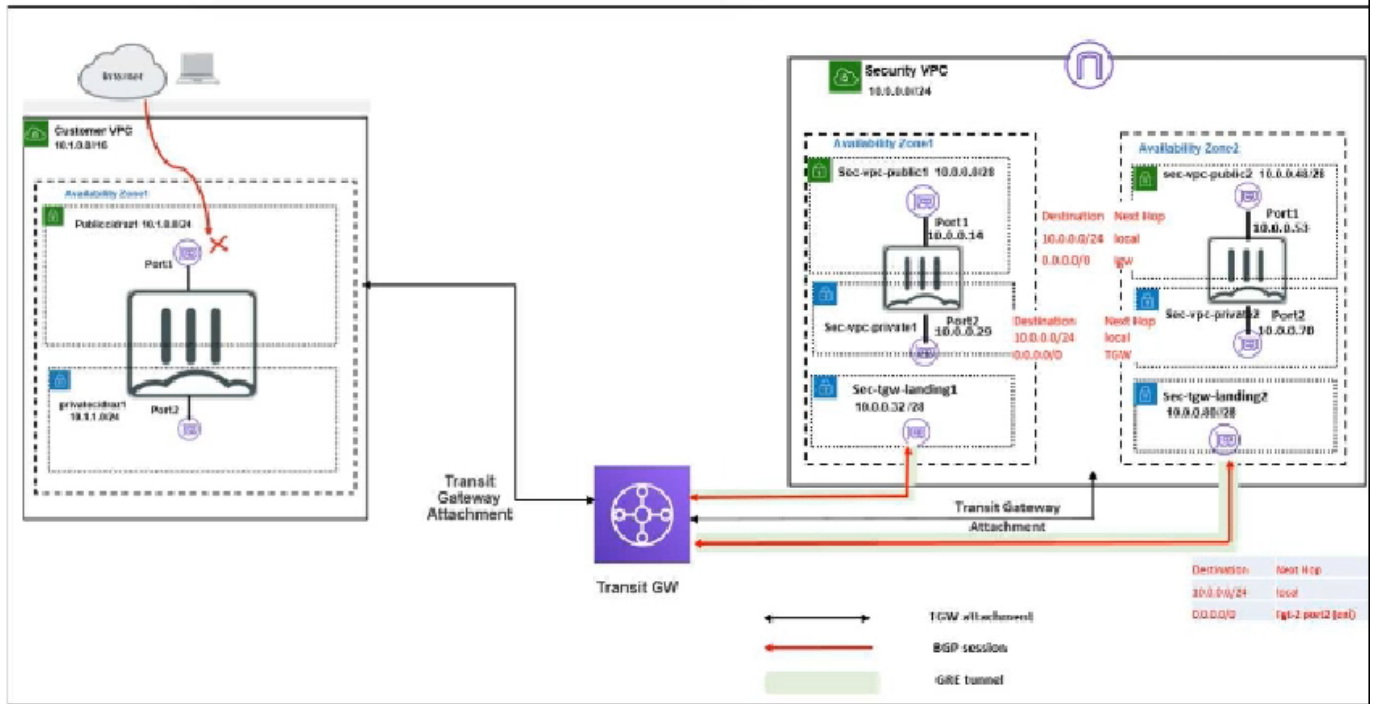

Answer:

B

Question 8

Question Type: MultipleChoice

Refer to the exhibit.

Refer to the exhibit.

In your Amazon Web Services (AWS), you must allow inbound HTTPS access to the Customer VPC FortiGate VM from the internet. However, your HTTPS connection to the FortiGate VM in the Customer VPC is not successful.

Also, you must ensure that the Customer VPC FortiGate VM sends all the outbound internet traffic through the Security VPC.

How do you correct this issue with minimal configuration changes? (Choose three.)

Options:

- A- Add a route with your local internet public IP address as the destination and the internet gateway as the target.
- B- Add a route with your local internet public IP address as the destination and the transit gateway as the target.
- C- Add a route to the destination 0.0.0.0/0 with the transit gateway as the target.
- D- Deploy an internet gateway, associate an EIP with the Customer VPC private subnet, and then add a new route with destination 0.0.0.0/0 with the internet gateway as the target.
- E- Deploy an internet gateway, attach it to the Customer VPC, and then associate an EIP with port1 of the FortiGate in the Customer VPC.

Answer:

B, C, E

Question 9

Question Type: MultipleChoice

Refer to the exhibit.

Troubleshooting command

```
azadmin@Azure:~$ az feature show --namespace Microsoft.Network --name EnableHighAvailabilityMode
{
  "id": "/subscriptions/21100b64-cedc-19cc-a00b-017ec43592ac/providers/Microsoft.Features/providers/Microsoft.Network/features/EnableHighAvailabilityMode"
  "name": "Microsoft.Network/EnableHighAvailabilityMode",
  "properties": {
    "state": "Unregistered"
  },
  "type": "Microsoft.Features/providers/features"
}
```

Refer to the exhibit.

A Managed Security Service Provider (MSSP) administration team is trying to deploy a new HA cluster in Azure to filter traffic to and from a client that is also using Azure. However, every deployment attempt fails, and only some of the resources are deployed successfully. While troubleshooting this issue, the team runs the command shown in the exhibit.

What are the implications of the output of the command?

Options:

- A- The team will not be able to deploy an A-P FortiGate HA cluster with Azure Gateway Load Balancer.
- B- The team will not be able to deploy an A-P FortiGate HA cluster with Azure Load Balancer.
- C- The team will not be able to deploy an active-passive (A-P) FortiGate high availability (HA) cluster with SDN connector.
- D- The team will not be able to deploy an active-active (A-A) FortiGate HA cluster with Azure Load Balancer.

Answer:

D
