Question 1

Question Type: MultipleChoice

A developer has an existing DataRaptorLoad that insert Contact records with inputs as LastName and firstName. The DataRaptor works as expected when previewed.

The developer creates an integration Procedure to test the DataRaptor and is using a SetValues element in the Integration Procedure to set the first name and last name for the contact record. The DataRaptor and Integration Procedure are set up as shown in the exhibit below.

Interface Type	Input Type	Output Type	Required Permission (Optional)	Description
Load	JSON	SObject		

OBJECTS		FORMULAS	FIELDS	OPTIONS	PREVIEW
1 - Contact	All				
INPUT JSON PATH		DOMAIN OBJECT FIELD			
firstName		FirstName			
lastName		LastName			

When the developer executes the Integration procedure in preview, the following error message displays: Required fields are missing: [last Name]",

How should the developer address this issue?

Options:

- A- SetValueContactDetails should have been added to Additional input of DataRaptor Post Action in Integration Procedure
- B- The Set values Action Keys should include the DataRaptor Post Action element name path, e.g LoadContactDetails, lastname
- C- The DataRaptor Post Action in the integration procedure should have been executed before the Set Values Action
- D- The valid field names should be added in the Domain object field in theDataRaptor

Answer:

A

Explanation:

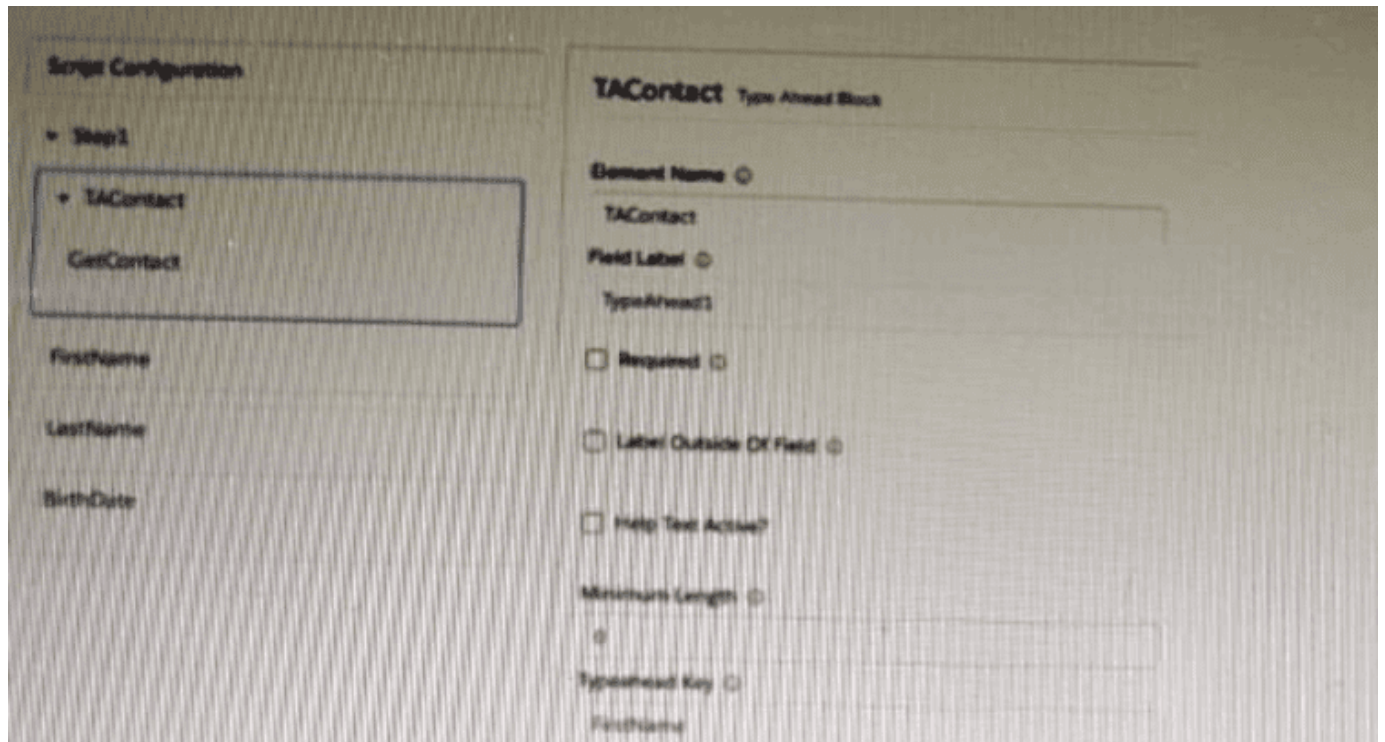

According to the Integration Procedure Actions page, "To pass data from a Set Values action to a

DataRaptor action, add the Set Values action name to the Additional Input field of the DataRaptor action."

Question 2

Question Type: MultipleChoice

Refer to the exhibit below.

What is the reason that the fields fail to display the fetched data?

Options:

- A- Lookup Mode is selected in the properties of the Type Ahead Block.
- B- FirstName, LastName, and BirthDate are not placed inside the Type Ahead Block.
- C- The typeHead key is not in the correct format.
- D- Use Data JSON is Not selected in the properties of the Type Ahead Block.

Answer:

D

Explanation:

The Use Data JSON property must be selected in the properties of the Type Ahead Block in order to

display the fetched data in the fields. The Lookup Mode property is used to specify the type of lookup to perform. The FirstName, LastName, and BirthDate fields can be placed inside or outside the Type Ahead Block. The typeHead key is in the correct format.

Question 3

Question Type: MultipleChoice

The OmniScript must retrieve device details stored in the Asset object and then call an external system to send troubleshooting commands via REST API to the device.

Which two OmniScript element should the developer use to configure this functionality?

Options:

- A- DataRaptor Extract Action
- B- REST API Action
- C- Navigation Action
- D- SOQL Action
- E- HTTP Action

Answer:

A, E

Explanation:

According to the OmniScript Action Elements page, a DataRaptor Extract Action can be used to "get data from one or more Salesforce records" and an HTTP Action can be used to "get, save, or delete data through a web application programming interface (API)".

Question 4

Question Type: MultipleChoice

Which two fields in an Integration Procedure can use a function like CONCAT or DATEDIFF?

Choose 2 answers

Options:

- A- In Procedure Configuration, in a Tracking Custom Data value field.
- B- In a Remote Action, in a Remote Options value field.
- C- In a Remote Action, in an Additional Output value field.
- D- In a Response Action, in an Additional input value field.

Answer:

C, D

Explanation:

According to the [Integration Procedure Actions](#) page, a Remote Action can use a function in an Additional Output value field or in a Remote Options value field. According to the [Response Actions](#) page, a Response Action can use a function in an Additional Input value field.

Question 5

Question Type: MultipleChoice

What OmniStudio tool pre-populates the data in a PDF used by an OmniScript?

Options:

- A- A SOQL Query
- B- A DataRaptor Load
- C- A DataRaptor Extract
- D- A DataRaptor Transform

Answer:

D

Explanation:

According to the [DataRaptor Transform Overview](#) page, a DataRaptor Transform can be used to "pre-populate data in PDFs used by OmniScripts".
